## Clareholm Local News

Willard Irish, of Granum, is a Clareholm hospital patient.

Joseph Fournier is a patient in the hospital here since the 21st.

Born, September 14th, to Mr. and Mrs. J. C. Rennie, a son.

Hulbert Bill was operated on for appendicitis, at the local hospital on Thursday.

Chas. E. Cleveland of Lettbridge is a patient in the hospital here since Saturday last.

Gerald Lester was brought in to the local hospital on Wednesday, ill with pneumonia.

The infant daughter of Mr. and Mrs. "Lawrence" Strong was brought to the hospital on Wednesday.

Dolores Costello in "A Million Bids" at the Rex theater Friday and Saturday nights this week. Based on the story by Geo. Cameron.

As will be noted elsewhere in this issue, children under 18 years of age are barred from attending theatres, etc., till the ban is lifted by the Board of Health.

It's all very well to prove scientifically that frost cannot hurt the grain; but what some of the farmers are wondering is whether they can make the elevator men believe it.

The Canadian Red Cross Society has for free distribution a pamphlet entitled "Helpful Suggestions About Infantile Paralysis." Anyone interested may obtain a copy by writing to the Alberta Division Headquarters of the Red Cross Society, Edmonton, Alberta.

Perfect harvest weather has prevailed during the entire week, and cutting has progressed accordingly. Many farmers have finished cutting and a few more days of good weather would see the wheat all in stock. Thrashing parties are being turned up and with a continuation of favorable weather some will start next week, or possibly the end of this week.

Much interest was taken locally in the heavy weight championship prize fight at Chicago on Thursday evening. Evers available radio receiving set had a crowd around it. Both principals seemed to have their full share of local admirers, though preferences were not lacked heavily. One amusing wager was paid Friday noon when Frank Teters gave Walter Frederickson a wheelbarrow ride around the business center of town.

Calgary daily papers contain accounts of a farm accident in which Joseph Cheadle lost his life passing away in the General hospital on Wednesday. Clareholm people believe this to be the same Joseph Cheadle who formerly lived in this district, having been engaged in farming southwest of town.

Frank M. Cary, owner of the farm on which the accident occurred last Friday morning, in giving evidence at the inquest said giving evidence at the inquest said that his farm was near Forest Lawn and that the deceased had worked for him for the past three summers. He said he did not see the accident, but apparently deceased was going out on the bull chain, and the horses started, the bull of which the binder passing over his body. He was badly crushed.

## CLARESHOLM IS REAL ENTERPRISING

(Calgary Alberta)

Clareholm, the southern town that played such a prominent part in baseball the past summer, has closed to the cooperation of the boys, will be heard from in hockey. At a special meeting of the town council at Clareholm a few nights ago it was decided to go ahead with the construction of a rink. This building will provide for skating, hockey and curling. And it will provide a great deal

of pleasure, amusement and exercise, particularly for the young folks. In building the rink, those responsible should see that it has an ice surface of not less than 180 by 80 feet. Anything less would be too small for good hockey such as Clareholm is bound to have. It is just as well to put up a good rink that will do for years to come, than to find it necessary to make alterations from year to year. With a rink, Clareholm will be heard from in Southern Alberta hockey, or the next our guess. The town has a lot of real sports who will go the limit financially if they get a run for their money.

## PREVENTIVE MEASURES AGAINST PARALYSIS

As preventive measure against the epidemic of infantile paralysis, the Clareholm Board of Health has ordered as follows: The schools are to be closed until October 3rd, unless otherwise ordered.

Children under 18 years of age are to be required to remain within their own premises, and are not to mingle or play with children of other families.

Children under 18 years of age will not be permitted to leave the town without first receiving a written permit from the medical health officer, Dr. J. S. Hynes.

Children under 18 years of age will not assemble in any church, theater, or public gathering of any kind.

It is advised that parents refrain from assembling in crowds or public gatherings.

The friendly co-operation of the public is asked to preserve our children from the dreaded effects of this disease.

## General Precautionary Measures (Alberta Public Health Bulletin)

Keep children away from crowds. Allow them to play outdoors as much as possible, but not in contact with large groups of other children. Keep them by themselves as far as possible.

Give children wholesome and easily digestible food, including plenty of milk and vegetables. Raw vegetables and fruit should be thoroughly washed before being eaten. Milk should be kept cold and carefully protected from flies.

Children should be given a daily tub bath, and their clothing should be washed frequently. Rest. Twelve hours sleep in a well ventilated bedroom is a good rule to follow. Keep the bedroom windows open.

The home should be kept thoroughly clean, and free from flies or vermin of any description. Keep the home free from dust, but avoid dry sweeping and dusting. Sprinkle the floor with pieces of dampened paper before sweeping, and use a cloth which has been moistened for dusting.

Inasmuch as there is a great variation in the onset of infantile paralysis, at a time when the disease is prevalent, children showing any evidence of a departure from normal health should be carefully watched and isolated. It is urgent that prompt medical attention should be given in all cases.

In patients suffering from the disease careful attention should be given to the prompt disinfection of all nose, throat, and bowel discharges, and to articles soiled therewith.

When the disease is prevalent all children known to be ill and not receiving medical attention should be reported to the local Board of Health.

## Harker-Burnham

Cardston News—Miss Lavern Burnham and Mr. Leon Harker were married on Saturday evening, Sept. 10, at the home of Mr. and Mrs. Heber Harker Sr. Bishop Burt performing the ceremony. Those present were Mr. and Mrs. Heber Harker, Jr. of Hillspring, Mr. and Mrs. W. C. Burnham and Mr. and Mrs. Heber Harker Sr. of Cardston.

## Brooker's Quality Bread

from Saturday 24th  
at 10 cents per loaf.

Down in price but not in quality.

## CLARESHOLM BAKERY

The Wawanesa Mutual Insurance Company's policy has always been, since its organization thirty years ago, to give to its patrons fire protection, at the lowest possible cost, consistent with safety.

And we are pleased to announce that from now on the cash rate on farm buildings will be reduced 25c per \$100.00 for three years. This makes our cash rate \$1.25, or \$2.00 per \$100.00 if your house has lightning rods and basement chimney.

Our assessment note plan requires no money down. And this year the rate is fixed at 20% or 40c per \$100.00 for one year.

## ANSWERS TO LAST WEEK'S QUESTIONS

232. The Size and Value of the American Corn Crop?

American farmers plant annually about 100 million acres of corn; average yield 30 bushels per acre, or 3 billion bushels; value \$1.5 to 3 billion dollars—loaded to the verge would make a line around the world. It is about three-fourths of the world's total production. By far United States' most valuable crop—exceeds combined value of cotton and wheat crops; is twice the value of iron production; 20 times the annual yield of gold. Earliest American settlers found the Indians growing and eating corn; it soon became a staple diet with the colonists and its use has grown and extended ever since.

233. Principal Uses of Corn?

Corn is very nourishing and fattening. Half the crop is fed to hogs and reaches our tables as pork; half the remainder is fed to work horses and beef cattle; corn silage is the principal food of dairy cattle and young growing stock. Output of corn meal is 25 million barrels annually; hominy and grit 400,000 tons; corn starch 800,000 tons; corn oil and corn syrup are manufactured in immense quantities. Thirteen million cases of green corn are canned each year; numerous other by-products, including gloves, breakfast foods, paper and twine from leaves and stalks, fuel and pipes from the cobs.

234. A Brief History of Corn?

Corn came in North America dates back thousands of years—unknown to Old World prior to discovery of America; it now grows in nearly every country of the world; in some places has become the "staff of life." Italy, the Balkan States, Hungary, Spain and Portugal consider the principal corn areas of Europe; Brazil and Argentina of South America; also raised in southern Asia and southern Africa. In North America is successfully raised from Mexico to well into Canada. Varieties suitable to the various climates have been developed, those grown in extreme North maturing within three months.

235. What Is Spanish Moss?

Is the moss of commerce; trade name is "vegetable hair." Wooded areas near the coast from Virginia to Texas are more or less covered with this beautiful hanging moss. Is not a parasite, but derives its nourishment from the air, simply using the trees for support. Is gathered in immense quantities; and after a special drying and ginning process, is baled and shipped to northern industrial plants, and used for stuffing mattresses, pillows, cushions, chairs, harness, dolls and similar places where cotton and hair is usually employed. Owing to its cheapness, is supplanting hair where low-priced articles are in demand.

236. The Wastefulness of Small Power Plants?

Steam plants of less than 200 h. p., are wasteful. Unless even a large industry uses its power almost constantly, it is cheaper to buy it from a large producer. Small power plants require 10 to 20 lbs. of coal per kilowatt hour (about 1.4 h. p.); big modern steam-electric plants require less than 2 lbs.; labor saving is also large. The contemplated Eastern Superpower Zone embraces territory east of Buffalo and Pittsburgh north of the Potomac. Equipping this zone with superpower at a cost of \$1,294,000,000 would enable the 96,000 factories and the public utilities together to effect an annual saving of \$429,000,000.

237. Comparative Efficiency of Electric and Steam Locomotives?

The electric locomotive is cleaner, simpler and requires much less attention than the steam locomotive; can be kept at work 20 hours a day, while the steam locomotive does well to average 8 hours. Steam locomotives on the New Haven road averaged 15,000 locomotive miles per year; electric locomotives, 33,500; steam passenger locomotives, 30,500; electric passenger locomotives, 73,000. Two electric locomotives will pull the same train as three Mallet locomotives, at double the speed, making an output per locomotive hour three times as great, with a saving in operating wages of 40 per cent.

238. How Superpower and Railways Electrification Would Relieve Freight Congestion?

About two-fifths the freight movement of the United States consists of coal and coke. At present the coal is used for heating and domestic purposes. As superpower contemplates burning the coal at the mines, the railways would be relieved of about one-third their freight burden. The electric locomotive will move a much larger load in proportion to its weight than the steam locomotive, and double the speed; in fact will produce a ten-mile movement two to three times as great. Doubling the speed of freight trains would eliminate much idle time they now spend on sidings giving preference to passenger service.

## NAVY LEAGUE OF CANADA

## ALBERTA DIVISION

The Rev. Fred Cooke, representative of the Navy League of Canada, who has been in Calgary, taking subscriptions to Canada's National Magazine of Yachting and Shipping, and donations for the Navy League, wishes to thank the citizens for their assistance, as they have subscribed about \$67.00 to the Alberta Division. The Navy League of Canada assists the widows and orphans of our men of the merchant service as they do not receive government assistance. The Navy League supports sailors' homes and institutes, etc., in all our larger Canadian ports from coast to coast and looks after the welfare of our seamen when ashore. The Navy League also trains boys and young men and makes better Canadian citizens of them. The Alberta Division is required to raise \$88,000.00 as its quota to the \$250,000.00 budget of the Navy League and hopes to raise this amount as quickly as possible, with the combined assistance of our people throughout the province.

The Navy League of Canada directed some 800 boys and young men into the Merchant Marine in 1926, and its work is almost entirely in its interests. Show some of our good citizens by helping the Navy League in its most worthy cause in every way possible and so be loyal to Canada and the Empire.

The Sailor Magazine is published monthly, at \$2.00 per year, and it ought to be in every Canadian home, in every Canadian organization and institution.

All matters belonging to the Navy League can be referred to headquarters and there regulated. Subscriptions to Canada's National Magazine of Yachting and Shipping, as well as donations for the Navy League, can be sent to: Jno. A. Irvine, Esq., or Rev. Fred Cooke, 817 First Street East, Calgary.

## The Welcome Sign

"Nobody asked you, sir," said the coy maiden. And in matters of buying, as well as in affairs of the heart, most people like to be "asked." Often, indeed, they insist on a proper invitation.

He is a wise merchant who keeps the welcome sign constantly before the community in the form of advertisements in The Review-Advertiser. There everybody sees it—for advertising is "the light of directed attention."

Speak up. Light up. Hundreds of good customers are listening for your message and watching for your welcome sign in The Review-Advertiser.

## People Shop Where They Feel Welcome

Another PRICE Suggestion  
Maple Nut Cake and Chocolate Layer

THIS unusual, economical Maple Nut Cake will keep fresh for several days, and the Chocolate Layer Cake, made in a little different way with Dr. Price's Cream Baking Powder, is a family favorite too. Try one or both of them today!

(All measurements for all material are level.)

## MAPLE NUT CAKE

1 cup shortening  
1 cup light brown sugar  
2 eggs  
1 1/2 cups milk  
1 1/2 cups flour  
2 teaspoons Dr. Price's Cream Baking Powder  
1 cup chopped nuts—preferably pecans  
1 teaspoon vanilla extract

Cream shortening; add sugar slowly and yolks of eggs and milk and beat together and add chopped nuts; fold in beaten whites of eggs; add flavoring. Bake in well greased loaf pan in moderate oven 35 to 45 minutes. Cover top with maple icing and sprinkle with chopped nuts while still soft.

## MAPLE ICING

1/2 teaspoon butter  
2 tablespoons hot milk

1 1/2 cups confectioner's sugar  
1/2 teaspoon Dr. Price's Cream Baking Powder  
1/2 cup milk  
Add butter to hot milk; add sugar slowly to make paste of the right consistency to spread; add flavoring and baking powder; spread on top and sides of cake.

CHOCOLATE LAYER CAKE  
1 cup shortening  
1 cup sugar  
1 egg  
1 cup milk  
1 1/2 cups flour  
4 teaspoons Dr. Price's Cream Baking Powder  
1 teaspoon salt  
1 teaspoon vanilla extract

Cream shortening; add sugar gradually, beating well; add beaten egg, one-half the milk and mix well; add one-half the flour which has been sifted with salt and baking powder; add remainder of milk; then remainder of flour and flavoring; beat after each addition. Bake in greased layer cake tins in moderate oven 15 to 20 minutes. Put together with

CHOCOLATE FILLING AND ICING  
8 cups confectioner's sugar  
1/2 cup milk  
1 teaspoon vanilla extract  
2 teaspoons Dr. Price's Cream Baking Powder  
1/2 cup melted sugar oil

To sugar add boiling water very slowly to make a smooth paste; add vanilla; blend thoroughly and strain well. Spread between layers and on top of cake.

## CHURCHES

## UNITED CHURCH

At the morning service (11 o'clock) I will speak on "The Overcoming of Fear." Christ's Life and Power destroy fear: Have you gained this victory?

There will be no Sunday school. Rally, Day will be announced later.

I will tell a short story for boys and girls at the morning service. You can ask your father and mother to tell you about it when they come back from church.

Service 7:30 p.m.—Subject "The Gospel Standard of Life." The recent prize fight throws a side light on our own, that is not flattering to ourselves.

Rev. R. W. Dalgleish, B.A.

## THE CHURCH OF THE NAZAREN

Next door west of the Clareholm Garage.

Full salvation preaching.

## Week Night Services

Tuesday, 8 p.m.—Prayer meeting.

Friday, 8 p.m.—Bible study.

Remember—"A glad hand welcomes you to worship with us."

Rev. A. H. Eggleston, B.A., Minister.

## Canada's Trade Expanding

Growing Volume Of Exports To All Parts Of The World

Flour made from Canadian hard wheat is now being sold by way of Hamburg to Czechoslovakia where it is found that it reduces the working hours in the bakeries one hour per day.

Last year Canada's exports to the Irish Free State were fifty per cent larger than the year before, the exports being mostly in wheat, flour and lumber.

It is surprising how the basic industries in our natural products are exporting all around the world. The canned salmon of British Columbia goes to nearly every part of the world where ships can carry them. A refrigeration service carries our fruits and vegetables to the east coast of South America. Canadian hogs are shipped to England and will this year go to Australia. Thirty thousand bags of potatoes were this year shipped from Vancouver to Brazil, and apples were shipped to all corners of the world. For example, the oranges were recently sent from Vancouver to Shanghai. A small factory in Ontario sent off some machinery the other day to a place in the interior of India. The Toronto workman who is shaping a piece of wood to be used in making a radio set, will find whether the machine will be sold to a farmer fifty miles away or exported to Russia or Australia.

This country is now carrying on a trade with the world beyond her own borders that equals in total value the foreign trade of any other country. The doing when her population was ten times what ours is. The facilities for doing business with the world as a trading area are improving every day — transportation, communication and international banking are every day doing their work better — Toronto Star

## Bigger But Not Stronger

Gots Have Difficulty In Lifting Swords Used By Their Ancestors

A group of husky Scots who paraded in a historical pageant at Glamis Castle in Edinburgh, are convinced that they are bigger men than their ancestors.

For the tale they had to do ancient armor and most of them were unable to squeeze into it. There was a lot of armor, but the participants found a suit which was even an approximate fit. They were all too big for the armor which was the tightness of the armor compelled all the larger men in the cast to obtain other costumes and a London theatrical firm was called on to supply post haste some armor of more recent design, proportioned to the stature of the modern-day Scotsmen. But if the warriors of old were smaller, they must at least have been more brawn. Swords used by the soldiers in the days of the Scottish King James IV, were so heavy they could hardly be raised above the heads of participants in the pageant, even after practice prior to the event.

## Was Once a Dedication

What Letter "R" Means On a Doctor's Prescription

The letter "R" is only the first of the word "recipe," the Latin for "take." We find exactly the same term in the housewife's cookery recipe. So the doctor's prescription, in order to the chemist, really begins with "Take this," so much of this, that, and the other drugs.

If, however, we look carefully at the most prescription we see, we shall notice that the "R" is not quite a little initial, but that there is a little stroke or flourish to the letter. This is generally taken to be a corruption of the old symbol in astrology for the planet Jupiter, under whose care medicine was once supposed to be. The wise man, then, of these days started off his prescription with a little note dedicating the whole affair to the care of Jupiter. This little dedication was shortened into a symbol, and the symbol in turn has become part of the initial of the modern doctor's prescription.

She called up the weather bureau. "How about a shower tonight," she asked.

"It's all right with me," replied the W. M. "If you need one, take it."

"But, surely James, seeing it is hotting!"

"Not so. For instance, I see you every day."

"Don't you know why that man carries an umbrella, dad?"

"Dad—No, why?"

"Don't—Because it can't walk."

—BETHE N. 1096

## Sanctuary For Musk-Ox

Government Takes Steps To Preserve This Big Game Animal

Canada has just taken an important step in the work of conserving the musk-ox by establishing a sanctuary in the valleys of the Hanbury and Grouse rivers east of Great Slave Lake in the Northwest Territories.

Why should Canada care for the musk-ox? Because it is one of the most wonderful and most interestingly useful of all our big game animals. Canada's effort to save it is not actuated by sentimentality but by business prudence. The Dominion Government must care for the big game for the sake of the Indian and Eskimo peoples who depend on it for their livelihood. It is also a means of maintaining a vigorous native population, without which the development of the vast resources of the north would be impossible. The Northwest has important big game animals other than the musk-ox but the characteristics of the latter are such as to make it exceedingly valuable. It is a big, strong animal, exceptionally free from disease, which can defend itself from all enemies except man armed with high-powered rifles. It is a hardy creature, resistant to the cold and the heat of the Arctic summer, and these qualities, together with its habit of passing away the winter in the mountains, render unnecessary the seasonal migrations which lay open the musk-ox to the attacks of its enemies. In a word the musk-ox is the place where the musk-ox has thriven for hundreds of years and it is well equipped to thrive if given protection from new enemies. It is thus peculiarly the big game animal of the Canadian Arctic.

This country is now carrying on a trade with the world beyond her own borders that equals in total value the foreign trade of any other country. The doing when her population was ten times what ours is. The facilities for doing business with the world as a trading area are improving every day — transportation, communication and international banking are every day doing their work better — Toronto Star

## A Modern Commodity

Soap As We Know It Was Not Used Short Time Ago

The present generation can hardly conceive a time when there was no such thing as soap. Yet it is only comparatively recently that soap has been so largely manufactured.

Early discovery of soap as a plant known as saponaria, the father of the modern soap, was due to the presence of a substance called saponin, which is also found in the seeds of many plants.

It is by using a natural substitute for soap that the crofters of the South Highlands succeed in keeping their blankets soft and white for many generations.

## To "Take French Leave"

Expression Originated With a Social Fair in France

To take French leave is to take leave without permission. It means leaving a person or place without bidding good-by to anyone. The expression originated with an 18th century social fair in France. The custom arose because some in England, chiefly among the imitators of Paris. According to the fair referred to a person leaving early without saying a word to anybody. The French saw certain advantages in the new custom. They maintained that just because one person was leaving, it was not necessary to excuse his disturbing the entire company.

But the conservative English, who thought the French practice was discourteous to the host. They jealously branded the practice "taking French leave."

## Obscured His Vision

As he rubbed his tatters down the street a sharp-eyed window cleaner noticed the windows of a certain house were very dirty.

"Would you like the windows cleaned, sir?" he asked a gentleman who was industriously mowing the lawn.

"The other peered angrily over the tops of his spectacles.

"No," he snapped. "They do not require cleaning."

The window cleaner sighed regretfully, and asked softly: "May I give your spectacles a wipe over, sir?"

## Ginseng Root

Wild Canadian Ginseng Root Is Highly Prized By The Chinese

The Chinese root found in China and also in Ontario and other parts of Canada is held in very high esteem by the Chinese, and these who are fortunate enough to be able to gather it in Canadian woodlands are always assured of a market at an excellent price. It is held to have wonderful restorative and tonic properties and for centuries has been considered as the basic remedy of the Chinese materia medica.

The shape of the roots is most important; ginseng roots are named for the Chinese word "jen" meaning "man" and the forked roots with side shoots for arms most closely resembling the human being are attributed to have the greatest medicinal value. To illustrate the importance with which the Chinese clothe the shape of the precious roots one of the Canadian Trade Commissioners in China writes that a drug store in the city of Chefoo which recently had the good fortune to have five ounces of this highly prized remedy in stock not only photographed the roots which were in its store but also put up the city where they were most likely to meet the gaze of prospective purchasers and enable them to see for themselves in advance how unique and valuable in "conformation" were the stocks in question.

The Chinese ginseng is said as a rule to yield the greatest number of "man-image" roots; certain localities prefer to have them very much wrinkled. Ginseng roots grown in the wild state in Canada frequently possess these desirable attributes. The roots are not only highly prized but are also marketable at a slightly lower price. The gathering of the wild roots in Canada or the cultivation of ginseng may always be looked on as profitable, says the National Resources Intelligence Service of the Department of the Interior at Ottawa, because of the certain market which exists in the Far East, where the tea brewed from ginseng has been the standby in case of illness throughout the centuries.

## Modern Ruler Has Typewriter

Means Another Landmark In Progress Of Arabia

The Governor of Iraq, Fakhri Khayr al-Din, has acquired a typewriter. This may seem an inconceivable incident, but it is, in fact, freighted with much significance, as another landmark in Arab progress. Last year, it may be recalled, the sultan of the Hashemite Kingdom of Iraq, Fakhri Khayr al-Din, at first he vehemently declared that he never would enter that "carnage of Satan," though afterwards he made much use of it and did not great pleasure from it. Now he accepts without a demur a typewriter, proof of the more readily because the French officer who placed it before him took pains to have it type for him in Arabic the words: "God bless our lord the Pasha."

## Island Replaces Mountain

From little comes the report of a strange geological occurrence. A thickly-wooded hill north of the Clario River has vanished. Twelve feet of locality here a bed report like an earthquake, and many saw the whole forest being swallowed up by the earth in a hood-shaped chain, 1,200 yards long. Time to their further amazement they saw the river bed rising until on island 300 feet long and 90 feet wide was formed.

"So you girls are going to camp out. You'll find the cooking and washing up very irksome."

"Oh, we're going to take mother along to cook. She needs a vacation."

British Teachers in Canada

Sailing from Liverpool for Canada on Canadian Pacific steamer Mesopotamia, a party of 107 British teachers arrived to attend the conference of the World Federation of Education Associations at Toronto in August. Following the convention they will visit various parts of Canada, while a large number of them will take in the high lights of Canadian scenery and places of interest.

## Women In Public Positions

Rapidly Taking Their Place With Men In Business

In the days of Confederation women's spheres were mainly in the home, but now women find a place in practically all trades and professions. In the last few years, women have been taking an active part in municipal, provincial and federal affairs. One woman, Miss Agnes McPhail, has occupied a seat in the House of Commons for the past six years.

Sixty years ago the teaching profession was largely in the hands of men, for the most part poorly equipped for their work and sadly underpaid. Now, especially in the public schools, teaching is almost exclusively done by women, there being 39,575 women teachers in Canada as against 11,942 men. In many cases women have discarded their aprons and donned overalls. There is one woman mining engineer in the Dominion, twenty-one electrical engineers, and six civil engineers. So far, no woman blacksmiths or veterinary surgeons are recorded, but there are women painters, bookkeepers, engine builders, carpenters, etc. The census shows 57 women barbers and hairdressers, three bookbinders, three fur boot and shoe repairers, two garage keepers, and three chauffeurs. There are their lives leading and in fishing, one is a cemetery-keeper and grave digger, another an auctioneer.

In certain industries women find employment to a predominating degree. Textiles absorb a vast amount of their own clerical engineers, and being employed in textile factories, while 41,231 are engaged in manufacturing textile goods and wearing apparel, of which 16,441 are dress-makers, 2,629 milliners, and 2,210 tailors—Liggins-Post.

## France Once Forbidden Arts Of Beautifying

Royal Edict In 1770 Denounced It As Unbecomingly

Those Western States which have tried to secure by law the right of women to practice the arts of fashion and the toilette to enhance their attractiveness can scarcely claim that the excuse of originality. In fact, they are merely following the example of France, at a very long distance. Thus there is still nominally in force in France a royal edict dated in 1770 to this effect:

"Whereas shall allege into the marriage bond any subject of His Majesty through the use of powder, rouge, or perfume, or false hair, or iron corsets, or hoop skirts, or high-heeled shoes, or painted lips, will be prosecuted for witchcraft and the marriage will be declared null and void."

If this edict were to be enforced today—but, as the old song ran, "there are things 'twere better not to dwell on!"

Customer: "What is your opinion?"

New Clerk: "Ten cents a bunch."

Customer: "And what is your salary?"

New Clerk: "Seven dollars a week."

He-I hear Shun accidentally shot himself while looking down a gun-barrel.

He-I will be recovered.

He-I think so, but he will never lose the name way again.

North—"We're saving for a rainy day."

West—"What make of car do you plan to buy?"

When a sculptor makes a cast he has the other side for fame or notoriety.

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

## Feeding Of Swine

The Influence Of Feeding Methods On Type In Hogs

An experiment was recently undertaken at the Fredericton, New Brunswick, Experimental Station with the object of securing data on the influence of feeding methods on type in hogs. The pigs used in the experiment were divided into three lots. One lot was hopped with access to all the feed they could consume, and another lot was pair-fed, receiving all they could eat up, while the third lot was pair-fed, receiving a daily ration, about one-half that of the hopped-fed group, until the finisher when they were put on a full ration. The result of the experiment led to show that the self-feeder or hopped method of feeding from a trough to slaughter is not a practical method where the production of select bacon hogs is the objective. If used, the self-feeder or hopped method should be confined to the short finishing period. It was also shown that a two-stage ration in the early stages, up to four and a half months, tends to stunt development. Extremes in feeding, either very heavy or very light feeding, during the first four or five months, are undesirable.

## Making Fruit Jam

Pointers For Preserving Of Fruits And Vegetables In The Home

For home-made fruit jam it is always best to select fresh, slightly under-ripe fruit. At least one-half of the quantity should be slightly under-ripe in order to insure a sufficient amount of pectin to give a jelly-like consistency to the finished product. A new bulletin of the Dominion Department of Agriculture, on Preserving Fruits and Vegetables in the Home, gives full instructions for making all kinds of jams. It is pointed out that cooking in small quantities is always advisable, as the fruit is cooked more rapidly and this retains its color and flavor. Jam should always be cooked in a porcelain-lined vessel and stirred constantly with a wooden spoon or paddle to prevent scorching. A pound of sugar to a pound of fruit is the handy proportion long used, but very good results are obtained from using three-fourths of a pound of sugar to each pound of fruit. The bulletin contains recipes, not only for fruit jams, but for jellies, marmalades, fruit peels, pickles, etc.

## Photographing a Bear

Kodak Man Confesses To a Thrill When Charged By a Kodiak

The first of the Kodak bear expeditions have returned north from the Yukon. The Kodak bear, roaming the long peninsula jutting into the Pacific from continental Alaska is said to be the largest in the world and, according to Fred Wolfert, radio and motion picture man with the party, the animals look big enough to battle a tank.

## His First Lesson

Britain's Greatest Living Musician Helped By House Painter

His Majesty, the King's greatest living musician, received his first music lesson from a house painter. The painter, who was working in the country at Upper Broadbent, Worcester, and one day when he was in the house was being decorated. Young Edwards sought refuge in the garden. One of the painters noticed that he was very earnestly covering a piece of paper with pencil marks, and on closer enquiry found that the marks were meant for notes of music. But the boy had drawn only four lines to his staff. The painter was able to put him right. Perhaps, but for that lesson, we might never have had "Land of Hope and Glory."

## Wanted An Easy Job

"So you want a job on the railway, do you?"

"Yes, sir," answered the applicant, a tall, thin-looking person.

"What kind of work?"

"The other heaviest," he beamed vaguely about the room.

"Well, sir," he began, "I'm not over-keen, but I think I could walk round with a man who taps the car."

"I don't think it is wise whether they are in order and help him to listen."

"I don't return the ring you gave me. I can't marry you. I love another."

"He—What's his name?"

She—"Do you mean to kill him?"

He—"No. I want to see if he will buy the ring from me."

"Did you ever come fully equipped?"

"No, I furnished the girls."

And if the worm does turn, what does it benefit him?

First fare breaks hearts and second fare mends them.

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

He-I want a job on the railway, do you?"

WORLD HAPPENINGS  
BRIEFLY TOLD

Carroll Atkins, Nanaimo, B.C., has been appointed director of the Hart House Theatre, University of Toronto.

The date of the conference of Provincial Prime Ministers, with the Federal Government has been set for November 3, and will probably last four days.

Some special stamps have been issued in Japan to commemorate the fiftieth anniversary of the entry of that country into the Universal Postal Union.

Total profits made through liquor handled by the British Columbia Liquor Control Board reached \$1,913,572 for the six months' period ending March 21, it is announced.

The death of Zaidul Hasan, President of the Egyptian Chamber of Agriculture and Nationalist leader, is announced in a Cairo despatch to the Telegraph Telegram Company.

At a meeting of the Canadian Aeronautic Association held in Toronto the present state of aviation in Canada and plans for placing the country in a forward position in the world were the feature topics of discussion.

Future long distance flights should have far better preparation and more efficient requirements than are now in use to Hawaii according to U.S. Department of Commerce aviation officials.

Preparations for the establishment of two grain elevators and a flour mill at Victoria by a Buffalo-Vancouver syndicate, were considered recently at a special meeting of the city council. The combined cost would run to nearly \$5,000,000.

The erection of a museum and in the vicinity of Montreal to accommodate the transatlantic airships will be followed by providing similar facilities on the Pacific coast, according to a prominent Government official in touch with plans for connecting the farthing portions of the Empire by flying routes.

## Why Churchill Is Favored

Many advantages offered by North end Port Over Nelson.

Points in favor of Port Churchill as the terminal of the Hudson's Bay Railway, are outlined by General Patterson, president of the On-to-the-Bay Association, as follows:

Twenty-four hours unobstructed access.

Absolute protection from wind and waves.

Available for ships of any draft.

Great saving in cost of construction.

Can be completed many years sooner than Nelson.

No light ships or barge required as entrance is direct from deep water into harbor.

Insurance rates should be less.

There should be no loss of cargo saving in ship's time which is most important when a short season is taken into consideration.

Harbor is large enough to handle considerably more shipping than now enters St. Lawrence, and the extension of dock facilities can be made at very small cost.

It seems to be the case that the shore line is clear at Churchill sooner than at Nelson, owing to the northward current on the west side of the Bay, and there would be no difficulty in keeping the harbor open with ice breakers as long as may be desired.

There are some of the advantages; the only disadvantage is the maximum size and operation of ships additional at times of sailing.

## A New Sailing Record

The two-masted schooner Mary Elizabeth recently arrived at Port Elizabeth, Rhode Island, from Boston, Cape Verde Islands, having made the voyage of 2,600 miles in forty days. The remarkable feature of the voyage, however, was not the time but the fact that during the entire passage all her line rails were set and not once was one lowered or reefed. The veteran seamen of Providence port say that such a record has never before been made and that the voyage is unique in the annals of transatlantic navigation.

## Hardest Way Is Best

"The hardest way is almost always the best way," says Thomas A. Edison, and he was on in declaring that whenever he addressed a crowd quickly and easily he always distracts it and proceeds to test it by a different and more difficult method. The road to the best is the way of the most.

## Money Is a Thing that is Easy to Borrow

Money is a thing that is easy to borrow when you don't need it and almost impossible to borrow when you do.

## W. N. E. 1934

## Largest Indian Rock

Carving Discovered.

Petroglyph on Caribou Highway Near

The largest petroglyph on Indian rock carving known in Canada has just been reported to the archeological office of the National Museum of Canada at Ottawa.

This petroglyph is said to be more than 250 feet long and to be carved on a vertical face of reddish rock at the plateau, straight up the side of the Fraser River valley, about half a mile south of the eastern end of the Alexander Bridge on the Caribou Highway. A trail leading trail runs up to the direction, from which it probably can be seen. The place is only about 12 miles from Yale on the railway line and, being both the largest and the most easily accessible of the petroglyphs, it may be not only as a national monument because of its value as a tourist attraction.

Preliminary to this discovery the largest petroglyph in Canada was on the west side of a 75-foot canyon about one mile south of the Mackenzie highway, at a point some four miles from the sea in the "Norway of Canada" near Bella Coola.

## Automobile Fatalities

Report Of Deaths In Nine Provinces For 1926

The Dominion Bureau of Statistics has issued a special report on deaths from automobile accidents in the nine provinces of Canada during 1926. In this title were included the accidents in which automobiles were involved in collision with other vehicles, such as horse-drawn vehicles, street cars and trains.

In the nine provinces of Canada deaths from automobile accidents totalled 60 for the year 1926, made up as follows: Prince Edward Island, 1; Nova Scotia, 25; New Brunswick, 13; Quebec, 33; Ontario, 21; Manitoba, 27; Saskatchewan, 21; Alberta, 23; and British Columbia, 60.

For the whole country the death rate from this cause was 6.5 per 100,000 of the population.

Children under 15 years of age contributed 16 deaths or 10 per cent of the total.

## Winnipeg Newspaper Union

The Winnipeg Newspaper Union, which has been in existence for some time, has been successful in securing a new charter from the International Brotherhood of Journalists.

## DISTINGUISHED VISITORS TO CANADA

Canada is an ideal holiday resort for the opinion of this distinguished group of passengers who arrived in the Dominion a few days ago on the White Star liner Megantic to enjoy their vacation. From left to right the group includes Sir Thomas Kennedy, Bart., Senator in the Irish Free State; Lady Cragie, her daughter, and Sir Ernest Hart, Bart., M.P. for Greve, who owns estates in Wales. Sir Thomas Kennedy is a member of the House of Commons and has been in the world and he has said so in one of his books. On this trip he will travel right through Canada and probably meet big game in western Canada. Sir Ernest Hart, on the other hand, will enjoy a quiet holiday in the St. John's Lake district after returning to England on one of the White Star liners.

## Northern Volcano Is Active

Volcanic Peak On Western Aleutian Islands Is On Rampage

Denof Island, a volcanic peak in the Western Aleutian Islands which rose from the sea May 18, 1926, is intensely active again. The island, which is about 10 miles long, is reported upon its return from Siberia on a trading vessel.

In the west within three miles of the island, a large number of small boats were being driven off the island, and the boats of the burning of their island homes.

## Russia's Millions

Population Of Soviet Union Estimated At 146,200,000

The total population of the Soviet Union in round numbers is 146,200,000 says a report submitted to the Council of People's Commissaries by the Central Statistical Department.

Russia proper (The R.R.F.R.) has 100,000,000 people, Ukraine 20,000,000, White Russia 1,000,000, Caucasus 5,000,000, Finland 3,000,000, and Turkestan 1,000,000.

## Was Well Equipped

The view of a small village said to a youth of his flock, "I'm afraid, William, your tamper with the nation of several days in this party. I'm told that you're carrying a girl in this village, whether at Compton, and a child at the village."

"Well, sir," said William bluntly, "I've got a motor-bike."

Some women are not as fresh as they are painted, and some are more so.

## Premier Baldwin Learns to Drive

LARGEST LOCOMOTIVE IN BRITISH EMPIRE

The Rt. Hon. Stanley Baldwin, the British Premier, took a short course in engine driving at Pickering, Ontario, on the new Canadian National locomotive, number 6120, the largest and most powerful ever built in the world.

Mr. Baldwin, when visiting Kingston, Ont., heard that this train of the steel rails was an all-Canadian product, designed by Canadian National Railway engineers and built in Kingston.

Early on Saturday morning, No. 6120 was attached to the Royal Train to haul it into Toronto to mark the opening of the new Union Station.

Mr. Baldwin, although hardly engaged in the preparation of his speeches, halted in his work to make an inspection of the engine, eventually climbing into the cab with the engineer.

He showed the keenest interest in the manner in which the locomotive was handled when travelling at high speed, and he was particularly interested in the manner in which the engine was controlled.

"It is a wonderful piece of machinery and should be a source of pride to the Canadian designers and builders," said the Premier on leaving the locomotive.

No. 6120 is a forty-ton engine of similar type that are being built at this season for the passenger and freight service of the National System. When in regular service they will run 610 miles without change—the longest locomotive runs in the Dominion.

## Wonderful New Metal

Is Surprisingly Light

Canadians Interested In Development As

Densities Are Found Here

An exhibit demonstrating an interesting development of British metal, beryllium, was on show at the Dunlop House, Fleet Street, London, at a reception given by Sir Ernest Hart to a large company of scientists and engineers from the chemical and gas industries. This was a small sample of beryllium, a metal of remarkable strength and lightness, produced by the National Physical Laboratory, Teddington.

A white metal, with a brilliant surface when ground, beryllium, though surprisingly light, is nearly as hard as steel. Its successful laboratory production in this country is believed to be in advance of German and American research, and when it is possible to produce it on the large scale, it will probably have an important bearing on light alloy manufacture and engineering construction, on account of its combined lightness and strength.

Beryllium is prepared from natural beryl, a mineral which is found in Canada and other parts of the Empire, and two small blocks of it, quarried in Kenya Colony and British Somaliland, were also shown.

F. J. Watson, chairman of the Leeds Engineering Employers' Federation, when interviewed, was not surprised that the National Physical Laboratory had produced such a metal. Experiments had been going on for some time, and he was confident that it could be produced at a reasonable cost, he said, it will be very important to makers of aero planes and motor cars. In fact there will be hundreds of uses for such a product. Before a definite opinion can be pronounced more detail will be required, and the question of cost will have to be investigated.

## Rusians Inhabit Wrangel Island

Have Erected Several Houses Reports U.S. Scientific Expedition

When the British Northern Light, bearing John, Gordon, Chicago and Honolulu, and his field museum expedition through the Arctic on a scientific expedition, arrived at Wrangel Island, the expedition reported by wireless that the island had been inhabited by Russians, who had erected several houses and other buildings.

## Honor Dead At Men

Witnesses handed in the old Comptroller under the command of

Witnesses handed in the old Comptroller under the command of Lieut. General Sir Herbert Crofton Campbell, F.R.S., arrived to the Comptroller in London, headed by the Irish Guards band and deposited a wreath in commemoration of the 14th anniversary of the first battle of Mons. Old Bill, the first of the many London motor buses that saw active service in the war, participated in the procession.

The eyes of a frog, when exposed to the light of a candle, will generate an electric current easily measured on a galvanometer.

## Turns On Flood Lights

Drone Of Aeroplane Motor A Thousand Feet In The Air, Closes

The play down of an aeroplane a thousand feet in the air closed the switch that lighted a bank of flood lights at Battle Field, McGeogry, Pa. In the first demonstration of the sound-sensitive automatic lighting apparatus developed by H. T. Spencer, research engineer of the Westinghouse Electric and Manufacturing Company, Mr. Spencer, after having been in the air for some time, the experiment by bringing the "plane" to the ground in the glare of powerful lights turned on by the steady thrum of the ship's motors.

The device in effect uses the drone of the aeroplane to control electric energy. From a tiny current at first, this controlled energy is increased in power by amplifiers until it is strong enough to throw a good-sized lighting switch.

The switch locks automatically and the lights remain on until the ship is shown by a field attendant.

Vicent Inverness was the eldest son of the 3rd Earl of Coventry and was in his 52nd year. He was a member of the National Rifle Association Council.

"Can you stand on your head?" was a puzzling question of the youngest boy of the family.

"No," was the reply. "It's too high up."

And money is often the root of many a nasty tree.

## TUNNEY RETAINS CHAMPIONSHIP

Soldier's Field, Chicago, Sept. 22. Gene Tunney successfully defended the world's heavyweight championship tonight against a sensational challenge from Jack Dempsey when he carried off the judges' decision in a 10 round match before a record-breaking crowd of 150,000 that paid \$2,800,000 to see the smashing fight.

Tunney came back to win the fight with a brilliant rally in the last two rounds after being knocked down for a count of nine in the seventh round by a smashing right to the jaw, followed by a left.

Dempsey seemed to have the fight in his grasp at this stage, as the smashing attack had Tunney in retreat, but the champion backing to the defensive, weathered the storm until his head cleared.

There was much dispute about the ringside over the length of the count on Tunney's knock-down, some claiming it was slow in starting and that the champion actually was on the floor as long as 12 seconds.

Outside of the seventh round and a few briefly sustained drives at other stages, Dempsey was outboxed and outfought by Tunney, who seemed much the faster and stronger. The challenger was a target for Tunney's sharp right crosses. He was staggering in the fourth round and in the tenth was on the verge of going down under a heavy barrage. The old master kept plunging in until he was too tired to last, both eyes bleeding profusely from cuts and his resources almost expended.

The decision of the judges, and Referee Dave Barry, was unanimous.

## CANADIAN PACIFIC CROP REPORT

Winnipeg, Sept. 19. Cutting and threshing operations were suspended all through the west last week, as a result of heavy general rains. While it is uncertain how far damage from rust, frost and other causes has extended, it is freely conceded the crop will be a heavy one, according to the weekly report issued today by the agricultural department of the Canadian Pacific Railway.

If safely harvested the crop will put western farmers in a good financial position.

Ground is in excellent condition for plowing; a work that will be undertaken immediately harvesting is completed.

Additional harvesters could be used in each of the three prairie provinces, but no serious delay has been caused so far by labor shortage.

In Manitoba between 90 and 95 per cent of the wheat has been cut and approximately 65 per cent of other grains are down. The crop is turning out fairly well, despite damage from rust and frost in some localities. Oats are not turning out well.

About 95 per cent of the Saskatchewan wheat has been cut and about 65 per cent of coarse grains. The expense of harvesting the crop will be increased in some scattered districts by lodging.

Frosts were reported in Alberta at scattered points on the night of September 15 and 15. Any damage was confined to the cereal and oilseed crops. Grain generally is beyond danger from frost. What threshing has been done has shown satisfactory condition as to grade and yield.

Unsettled weather in British Columbia has injured the tomato crop. Apples have been improved in size and color by recent rains. Flax and clover are good and the tobacco crop in the Okanagan is showing well.

## Canadian Hunting Prospects Excellent

Canadian moose and deer hunting seasons are at hand and from reports reaching the tourist department of the Canadian Pacific Railway Company there is every indication that one of the best hunting seasons ever will be experienced.

Mike Halse sends down word from his camp at Metagawa, Ontario, that if the hunters don't get their deer and moose this season they will have that year in every way. From Schreiber, Ontario, where John Handel, outfitter, has been operating, the reports are just as encouraging. Handel says that the game has increased in the Superior Game Preserve (the north of the C. P. R. line) and a very considerable area, and the surplus has crossed to the north of the tracks offering good hunting. He says that caribou are roaming the woods in increased numbers. As the C. P. R. line is the north boundary of the game preserve, hunters don't have to go very far for their quarry.

The news from Schreiber's Camp at Lake Penaga, west of Sudbury, is also much to the hunter's benefit. Reports turned in by guides of Ogilvie Bros. Camps on the Tobique River, N.B., are to the effect that deer though very plentiful last season, show signs of much greater increase. The same word comes from A. D. Thomas at South Milford, in the Kennebec game preserve.

The hunting facilities of the Yukon and northern British Columbia districts are worthy of special mention.

According to sportmen who have hunted in all parts of the world there are no finer big game fields anywhere than those embraced by the Klondike and White River and the McMillan River districts of the Yukon territory. In addition to the remarkable inducements offered the hunter these districts have an impelling attraction for the tourist, man or woman, who delights in exploring the wonders and beauties of Nature in wild and primitive country.

The big game inhabitants, according to locality, comprise White sheep, mountain goat, Osborn, caribou, moose and three varieties of bear—grizzly, brown and black. Some magnificent trophies of all these species have been obtained in the past.

The Yukon game country is so vast in its extent that a great number of hunting parties can be out in the same season without ever being seen by one another.

The Klondike and White River district is reached from the East via the Canadian Pacific Railway through the world renowned scenery of the Canadian Rockies to Vancouver, thence by Canadian Pacific "Princess" steamer for an enchanting run of one thousand miles to Skagway, Alaska, where change is made and journey continued by train over the White Pass and Yukon route to White Horse, Y.T., a distance of 110 miles. Hunting grounds are situated about 124 miles from White Horse, the trip usually being made by automobile to Champagne Landing (48 miles) the first day; team the second day to Bear Creek (35 miles) and team the third day to Klondike Lake (24 miles) where the actual hunting commences.

## LOTS OF LOW-PRICED TIRES—And OURS are GOODYEARS

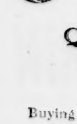

SOME of our good friends went elsewhere for tires when rubber was high. They had to have low price and we couldn't give them both low price and Goodyear quality.

Today we can. We can give you a Goodyear Tire for no more than you were paying for 'gyp' tires. Ask us for prices.

Every cord and balloon in the list built with SUPER-TWIST Cords. Every tire with a tough, rugged tread. Come in and see them.
